

PLAMEN TANEV

Senior QA Engineer | AI-Augmented Testing | Manual QA, Test Automation & API | Remote EU / EMEA

Varna, Bulgaria — Remote (EU/EMEA) | plamen.tanev31@gmail.com
linkedin.com/in/plamen-tanev-61096ba9 | github.com/PlamenTanevGit

PROFESSIONAL SUMMARY

Senior QA Engineer with 8+ years of testing enterprise SaaS (ServiceNow-based) and financial-services applications. Strong in manual testing, requirements analysis, API testing (REST, SOAP, gRPC), regression and release sign-off, backed by hands-on automation in Selenium (Java), Playwright and Cypress (JavaScript). Uses AI assistants and agent workflows to speed up test design, documentation and code analysis, with human validation of every result. Owner of an end-to-end automation framework (75%+ coverage of critical workflows, -60% manual regression effort, -3 days per release cycle). ISTQB certified, data-driven and ready for fully remote work across EU/EMEA.

AI-AUGMENTED QA & AGENTIC WORKFLOWS

- **Agentic test generation:** GitHub Copilot agents connected to Jira and Confluence through Atlassian MCP pull user stories into context and generate feature understanding and test-case files in a single-trigger, multi-phase flow built on reusable .prompt.md assets. Replaced a manual multi-step process; every generated test is reviewed by a human.
- **Copilot-assisted QA work:** story-by-story test generation, test-gap analysis, code review and test maintenance.
- **AI-assisted documentation:** Jira story and epic documentation prompt library (Atlassian RoVo): single-story expansion, bulk epic expansion, epic master documents. Microsoft Copilot for everyday documentation.
- **Claude Code:** custom skills, subagents and MCP integrations. Public Playwright suite built with AI assistance (see Selected Projects).
- **Custom QA GPTs (ChatGPT):** Cypress, Playwright, Selenium, ISTQB Test Manager / Analyst and Manual QA assistants. ChatGPT, Claude and Gemini for everyday QA and delivery productivity.
- **Prompt engineering:** working knowledge of about 10 prompting patterns (Persona, Few-Shot, Chain-of-Thought, Flipped Interaction and others) and reusable prompt assets.

CORE SKILLS

Manual QA: test strategy and design, risk-based testing, functional, regression, smoke, exploratory, cross-browser and compatibility, accessibility basics, defect lifecycle, release sign-off, requirements traceability

Test Automation: Selenium WebDriver (Java, JUnit 5, TestNG, Page Object Model, ExtentReports), Playwright (JavaScript), Cypress (Mocha / Chai)

API & Data: REST, SOAP, gRPC, Swagger / OpenAPI, REST Assured, Postman, SoapUI, JSON payload validation, SQL / MySQL

AI & Agents: Claude, Claude Code (MCP, SKILL.md skills, subagents), GitHub Copilot and Copilot agents, Microsoft Copilot, ChatGPT (custom GPTs), Gemini, Model Context Protocol, prompt engineering

CI/CD & Tools: Jenkins, GitHub Actions, Git / GitHub, Jira, Zephyr, TestRail, Confluence, ServiceNow platform, VS Code, Linux

Ways of Working: Agile / Scrum, cross-functional collaboration, QA mentoring, distributed and remote teams

PROFESSIONAL EXPERIENCE

NUVOLO — Sofia, Bulgaria (remote)

2019 – Present

Enterprise SaaS: ServiceNow-based connected-workplace, facility and asset management platform. Promoted QA Engineer → Senior QA Engineer → Senior QA Automation Engineer.

Senior QA Automation Engineer

04/2022 – Present

- Modernised test design with agentic AI: Copilot agents connected to Jira through Atlassian MCP generate feature understanding and test-case files from user stories in one trigger, replacing a manual multi-step process.
- Use Copilot agents for story-by-story test generation, test-gap analysis and code review, with human validation of every generated test.
- Architect and owner of the end-to-end test automation framework (Selenium, Java, Page Object Model): 75%+ coverage of critical workflows, -60% manual regression effort, -3 days per release cycle.
- Daily Jenkins CI/CD execution with automated failure reporting and stakeholder notifications. API automation (REST, gRPC) with REST Assured and Postman against Swagger / OpenAPI specifications.
- Lead QA for an enterprise facility-management product: quality risk analysis, test strategy, release sign-off and mentoring of QA colleagues.

Senior QA Engineer

03/2021 – 03/2022

- Led risk-based functional, regression and exploratory testing across web UI and API layers. Documented 200+ defects with clear reproduction steps, evidence and severity.
- Authored 500+ requirement-traced test cases in Jira that became the team's shared regression baseline and living test documentation.
- Brought QA risk input into sprint planning, refinement and retrospectives as the QA voice in a cross-functional Scrum team.

QA Engineer

2019 – 02/2021

- Release-readiness validation (functional, regression, compatibility, accessibility and exploratory) for the ServiceNow-based SaaS platform in an Agile / Scrum process.
- Validated REST and SOAP service integrations and request / response payloads with Postman and SoapUI.
- Delivered the product's first automated test coverage alongside manual testing: the groundwork for the later E2E framework.

EXPERIAN — Sofia, Bulgaria

01/2018 – 05/2019

QA Engineer

01/2018 – 05/2019

- Validated business-critical credit-reporting and identity-verification systems against financial-services compliance requirements.
- Ran QA for two parallel projects across multiple test environments: planning, execution, defect management and sign-off.
- Tested SOAP and REST integrations and cross-system data flows. Performed SQL (MySQL) backend data validation.
- Produced audit-ready test cases and defect records.

SELECTED PROJECTS

Public repositories at github.com/PlamenTanevGit. Test targets are public demo or third-party sites, not employer systems.

- **Selenium Java framework** (LamdaTestRefact): Page Object Model with Java, Selenium, TestNG and Maven on a demo e-commerce site. Data-driven tests, ExtentReports, thread-local WebDriver and parallel execution.
- **Playwright test suite** (Claude_Sinoptik_Autogenerated): JavaScript Playwright tests for a public weather site and a demo-request form (navigation, data structure, mobile viewport, form validation). HTML and JUnit reports and a GitHub Actions workflow. Built with AI assistance.
- **Mocha integration tests** (01.Student-Registry-App): HTTP-level integration tests for a small Node.js app, run in GitHub Actions across Node versions (practice project).

CERTIFICATIONS & TRAINING

- ISTQB Certified Tester, Foundation Level (2018)
- Automation Testing with Java (Selenium, TestNG, JUnit, web services), SWIFT Academy (2017)
- Software Testing, Soft Academy (2017)
- Web Services Testing (2021) · JavaScript (2020) · Relational Databases (2018) · Java Programming (2018)
